**About ScienceDirect**

ScienceDirect offers more than a quarter of the world's scientific, medical and technical information online.

- Over 2,000 peer-reviewed journals
- Hundreds of book series, handbooks and reference works
- Back to volume one, issue one

For more general information about the use and coverage of ScienceDirect, please visit the [InfoSite](#).

For tips on how to get started, check out the [online tutorials](#).

Fig. 9. Olazagutia thin-sections. All scale bars represent 1 mm. R, radiolarians; E, echinoid debris; B, benthic foraminifera; O, ostracods; S, sponge spicules; I, inoceramid debris. A, sample from -7.0 m illustrating the oligotrophic, condensed biofacies of the lower section, with dominance of radiolaria, sponge spicules and echinoid debris, and a relative rarity of planktonic foraminifera. B, sample from +1.5 m and the more productive middle section, showing inoceramid debris, a muddier lithology and more common foraminifera. C, sample from +3.5 m and the allochthonous biofacies of the upper section, densely fossiliferous with radiolaria and macrofossil debris, but containing few foraminifera, inoceramid fragments or sponge spicules.
