

"Capacity Building and Strengthening Institutional Arrangement"

Workshop

“HAZARDOUS SUBSTANCES AND WASTES” ”

Working group n. 2

“Develop a case-study illustrating hazardous substances management in Egypt, based upon the implementation of national legislation and guidelines; select a well-defined site (river basin, etc.), also using EEAA available filled EIA form or other EEAA documentation”

State - Impact - Response analysis concerning hazardous substances in Egyptian river basins

Activities:

Part 1: Draft a list of the main issues/problems concerning water quality management in your basin and discuss probable evolutionary trends.

Part 2: Establish priority objectives concerning water quality management within your basin by order of importance.

Part 3: Establish a list of the main administrative tools available to reduce the pressure posed by hazardous substances within the water cycle.

Part 4: Describe the role of public participation in water quality management and how its contribution could further enhance national strategies for the control of hazardous substances.
