

Workshop

“ACOUSTIC POLLUTION AND MEASUREMENTS”

Working Group N. 5

“Tentative practical information system for Egypt”

Objective:

The working group is finalised to the experimental building of an information tool system for Egypt. A structure of a data bank able to describe the noise situation and to provide a clear and exhaustive information to the public will be carried out, using a synthetic scheme developed for the Italian National Noise Observation System.

Activities:

- a) Analysis of the main characteristics of the noise situation in Egypt related to the environmental noise. Analysis of the available data and the noise indicators able to describe the noise conditions and identification of the requirements of the data bank.
- b) Division of the participants into groups for the analysis of the elements mentioned above;
- c) Distribution to the participants of the synthetic scheme;
- d) Hypothesis of a structure of the data bank:
 - I. ACTIVITIES SECTION
 - II. INFRASTRUCTURE SECTION
 - III. LAW SECTION
 - IV. EQUIPMENT SECTION
 - V. ACOUSTICAL PLANNING SECTION
- e) Elaboration by each group of a technical report on a specific section, with the data and the noise indicators identified;
- f) Analysis of the documents and discussion of the critical aspects;
- g) Discussion and debate regarding the adopted choices;
- h) Conclusions about the activities of the working group.
