RMs for environmental monitoring

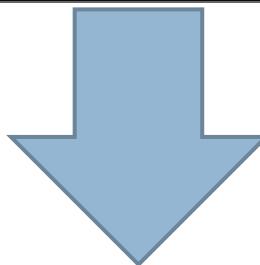

- **Are used for:**
 - **internal/external QC procedures**
 - **methods validation and collaborative studies**
 - **calibration of instruments**

- **Customers of ISPRA RMs are the Italian regional laboratories (ARPA/APPA)**

ISPRA Reference Materials

Availability of RMs with reliable property values is a key factor for reliable test data

**ISO /IEC 17025 and ISO
Guide 34 Accreditation**

QC & Homogeneity/Stability Study

Measurement Methods

ISO/IEC 17025 requirements	Method characteristics
Selection of methods	Fast measurement methods with high repeatability (CHN, EDXRF)
Method validation	Selectivity & calibration. Repeatability is calculated during each study
Estimation of measurement uncertainty	Measurement uncertainty is not used in ANOVA & regression
Results traceability	It is not needed in relative measurements

- 1 lab using different methods
- N labs using 1 method
- N labs using different methods
- Metrological traceability
- Measurements in repeatability conditions
- Assignment of property values

APAT-RM014 – As mass fractions
