

# Development of European Ecolabel Criteria for Buildings

## Towards a product group definition

Stefania Ministrini – APAT

## Towards a product group definition

Elements considered:

- standards and definitions
- market analysis
- environmental analysis (LCA approach)
- existing certification schemes

## Towards a product group definition

Possible definition:

buildings considered **in their entirety**, as well  
as small houses, **new, existing or renovated,**  
**public or private**, used for **different purposes**

## Towards a product group definition

Possible definition addressed to:

- entire building (exclusion of dwellings)
- buildings owned by private or public
- existing, new, renovated
- used for different purposes (residential and  
non residential, exclusion of leisure complexes  
and laboratories)

## Towards a product group definition

Environmental areas to consider:

- env. impacts in the construction phase  
(i.e. design, insulation, integration with landscape, impacts related to the construction works, etc.)
- env. impacts in the use phase (water, energy, waste, noise, comfort, etc.)
- *consideration of end of life phase*

## Towards a product group definition

Possible criteria structure:

- new buildings (construction phase, use phase, *end-of-life design*)
- renovating buildings (construction work, use phase, *end-of-life design*)
- existing buildings (use phase)
