

Development of European Ecolabel Criteria for Buildings

Main issues to be considered

Eng. Laura Cutaia – ISPRA

Criteria development – starting points

- European Ecolabel methodology
 - Main environmental impact
 - Fitness for use
- Specific aspects for buildings
- Connection with other (European) instruments/regulations
- Issues and criteria mainly used by others certification schemes

Criteria development – starting points

- European Ecolabel methodology
 - Main environmental impact (LCA)
 - Fossil fuels consumption
 - Non renewable resource consumption
 - Resources consumption
 - Land use
 -
 - Fitness for use
 - Comfort
 - Durability
 - Maintenance
 -

Criteria development – starting points

- Specific aspects for buildings
 - Relation with the territory
 - Mobility
 - Services
 - Costs
 -

Criteria development – starting points

- Connection with other (European) instruments/regulations
 - Construction Product Regulation
 - CEN/TC 350
 - Green Public Procurement

Criteria development – starting points

- Issues and criteria mainly used by others certification schemes
 - The iiSBE International
 - The LEED rating system
 - The CASBEE
 - The BREEAM ECOHOMES
 - The Swan-labelling of Small houses
 - Haute Qualité Environnementale
 - The klima:aktiv
 - The ITACA protocol
 - The SB100 standard
 - The LEnSE project

European Committee for Standardization
Comité Européen de Normalisation
Europäisches Komitee für Normung

Concept of Sustainability Assessment – CEN/TC350
