

# Monitoring rock slope stability in high-mountain regions

Giovanni Battista Crosta, Paolo Frattini

University of Milano Bicocca

Friday, November 17th 14.30 - 16.00  
PALAFFARI Basement HALL -1, Piazza Adua 1 Florence

Funded by  
the European Union  
NextGenerationEU

# Motivation

Rock slopes in periglacial areas are remote zones, however...  
...structures and infrastructures may be present in these areas, together with touristic activities

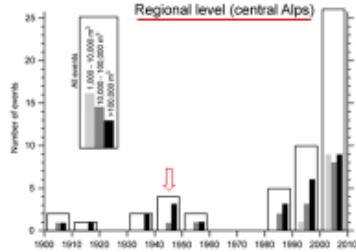

# Motivation

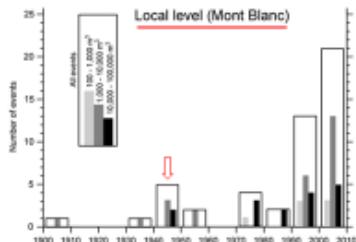

Periglacial areas show increasing rate of rock instabilities associated to climate change

- Threat for tourism and infrastructures
- Loss of landscape/natural heritage  
(es:*Dolomiti*)

**Switzerland and Italy and France border regions: 1900 - 2010**

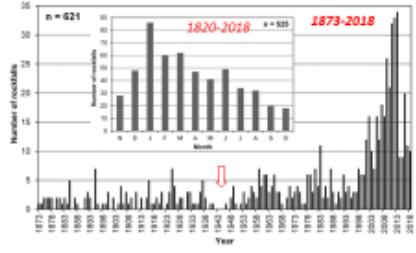

**Local level (Mont Blanc)**

**Austria**  
Sass and Oberlechner (2012)

**Germany**  
Rupp and Dammm (2020)

**Cima Una**  
12-10-2007

**Punta tre amici, Monte Rosa, 16-12-2015**

**Thurwieser,**  
18-09-2004

**Cima di Lago Spalmo – Val Viola 8/9/2015**

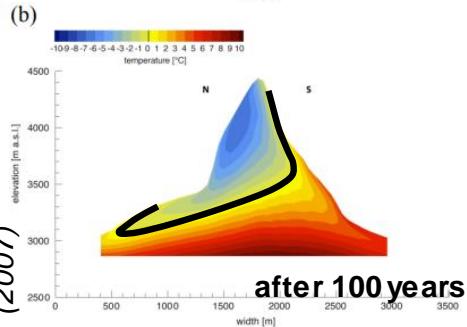

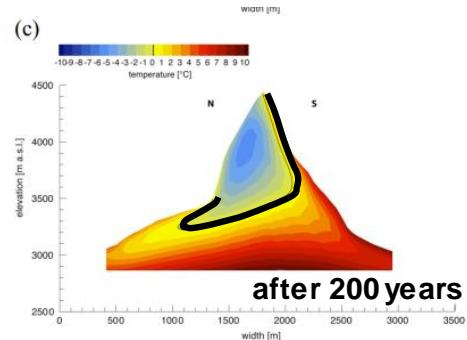

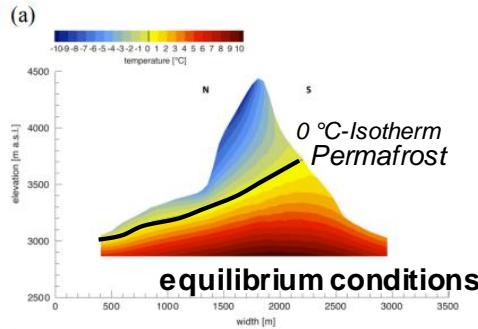

**Cengalo,**  
23-09-2011

# Motivation

Processes responsible for instabilities at high elevation still need to be investigated:

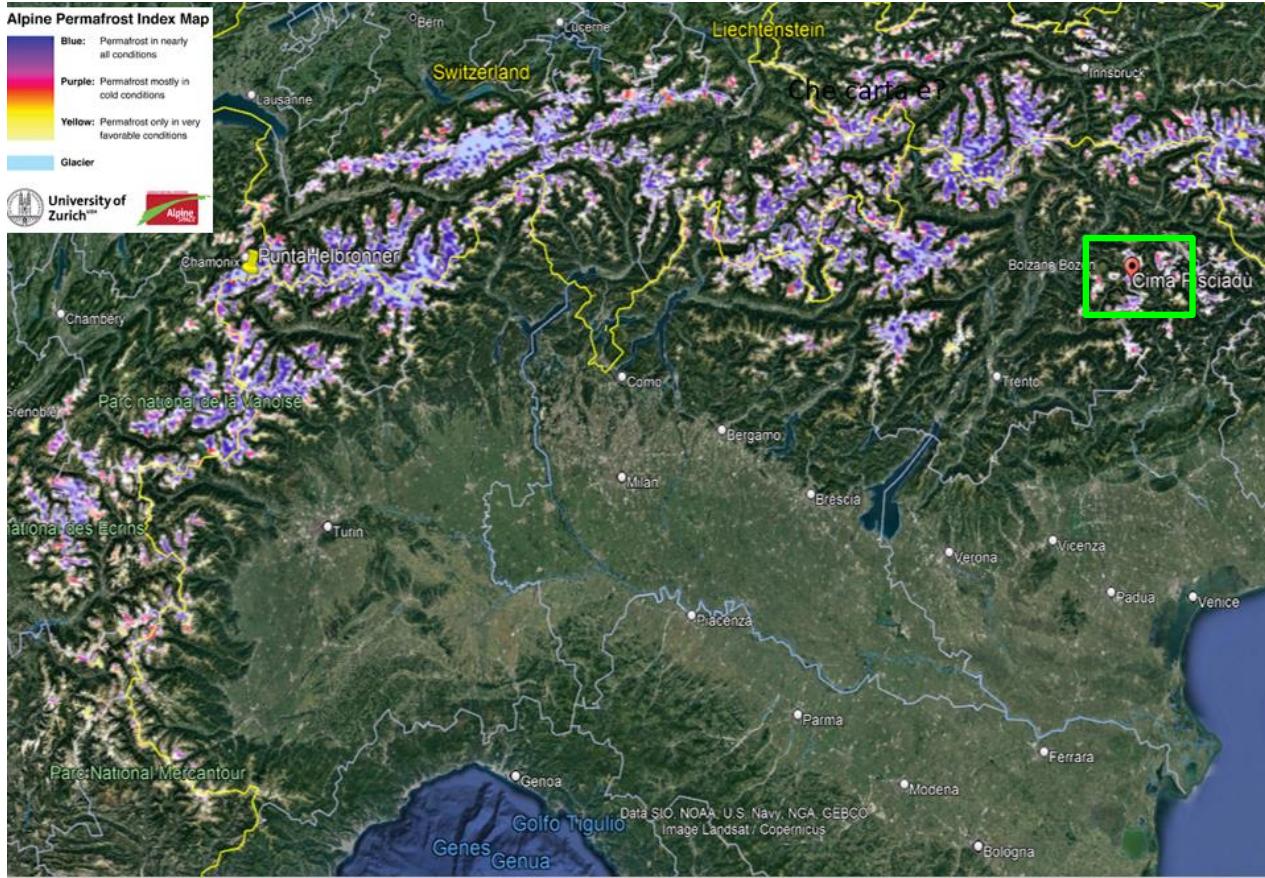

- Glacier retreat and slope oversteepening
- **Permafrost degradation**

*Noetzli and Gruber (2007)*

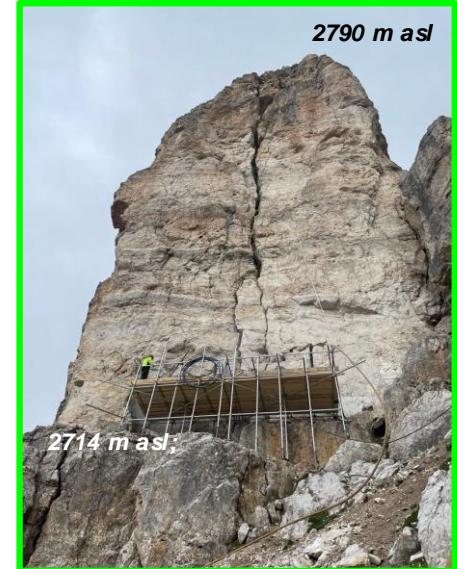

**Monitoring of  
rock-slopes in  
high-mountain  
areas**

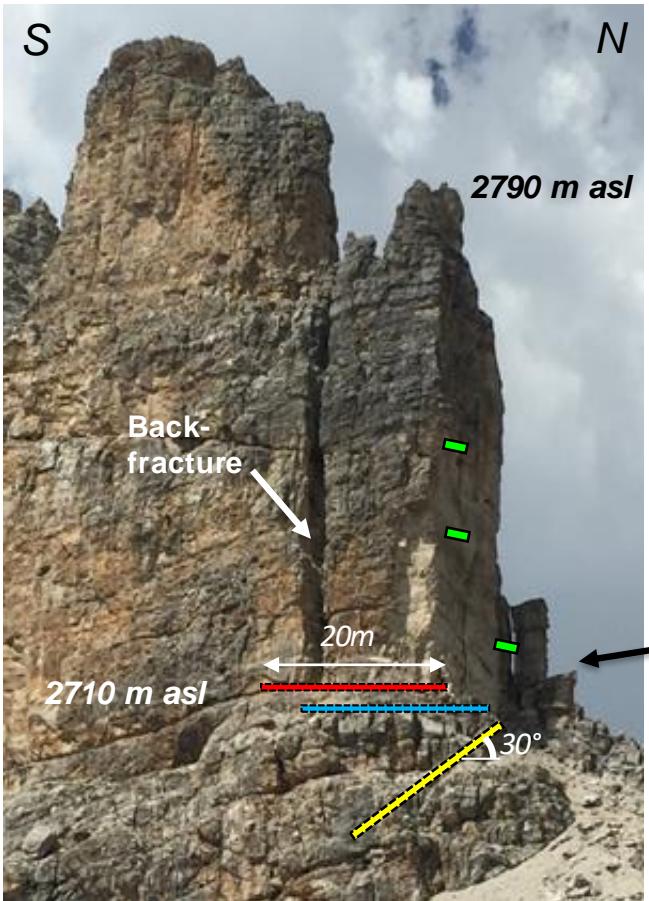

## Monitoring site

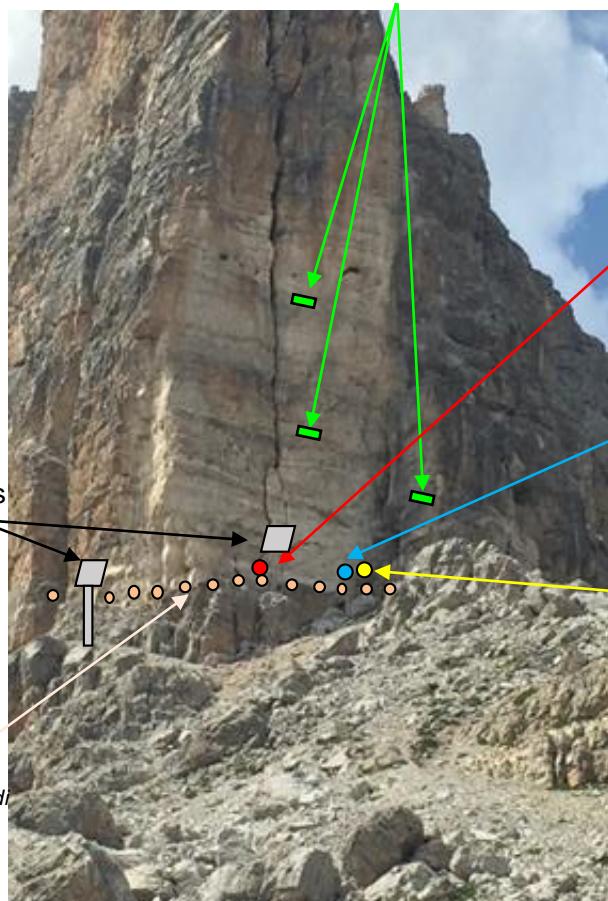

**Gruppo del Sella,  
 Sass de Lech**

# Monitoring system

Inclino-extensometers (+T, AE) (PRIN 2022)

**Horizontal hole- DMS**  
90 mm, 21 m  
(inclin. extens.,  
T, AE)

**Thermometric chain**  
90 mm, 21 m

**Inclined hole - DMS**  
90 mm, 21 m  
(inclin. extens.,  
T, AE)

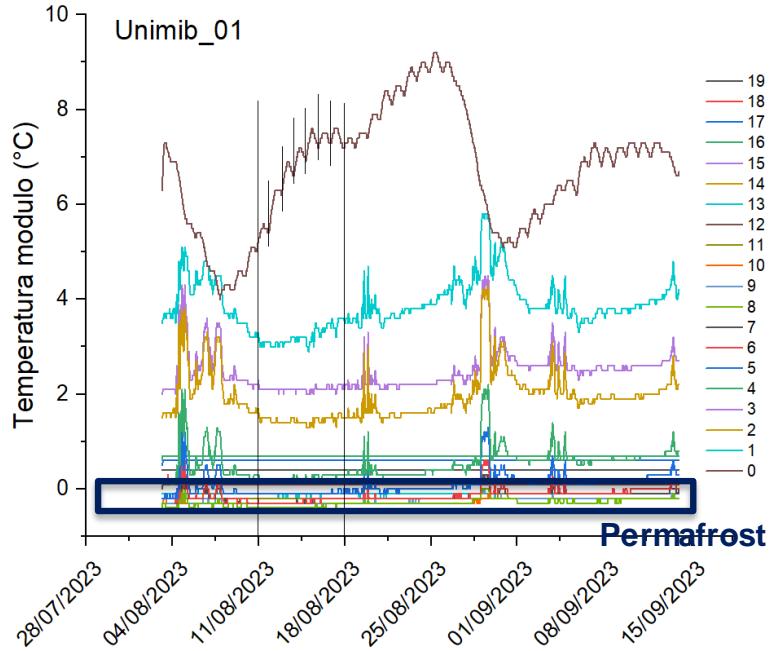

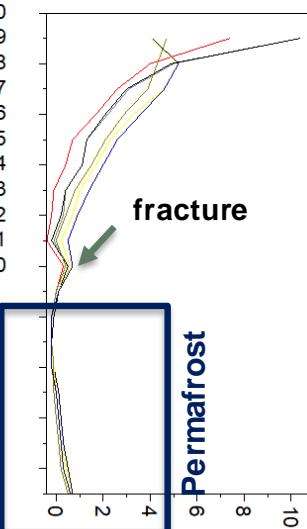

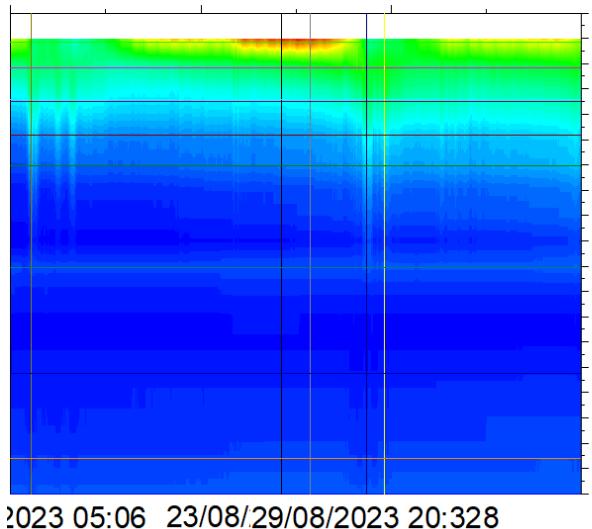

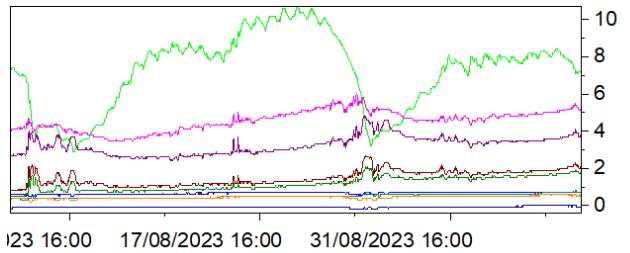

# System installation – agosto 2023

**Thermometric chain  
0.25-4 m**

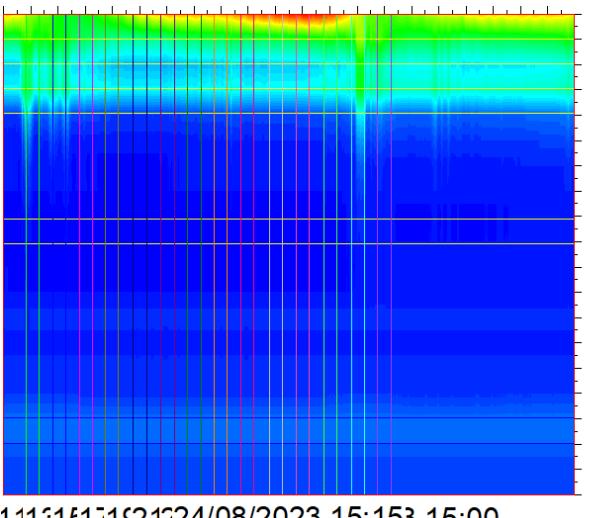

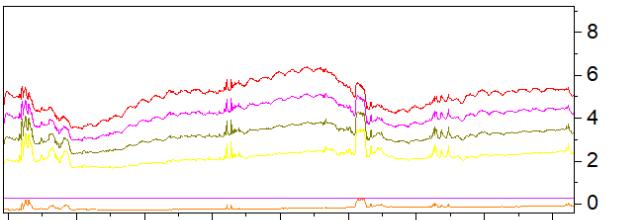

## Sub-horizontal DMS

**Displacements**

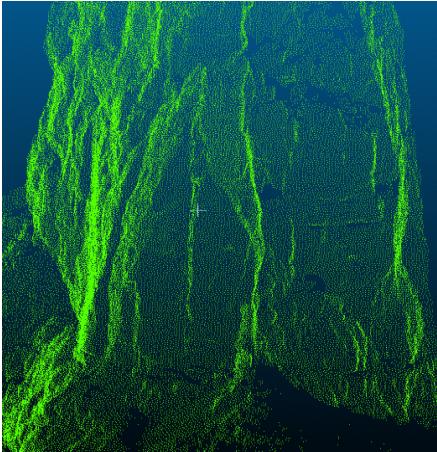

## Inclined DMS

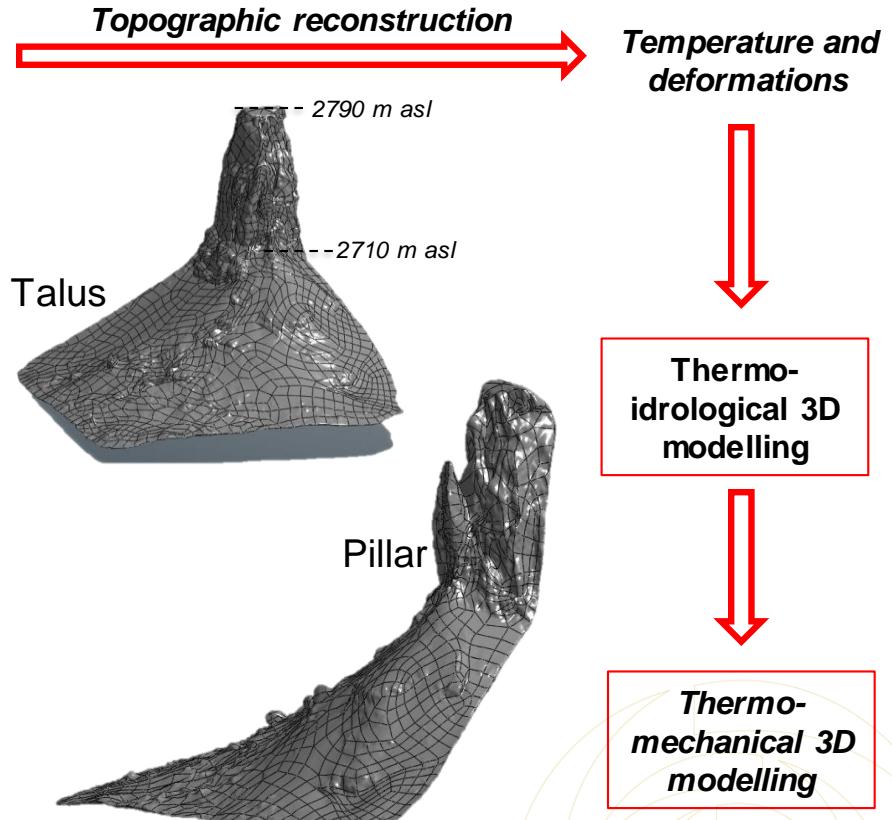

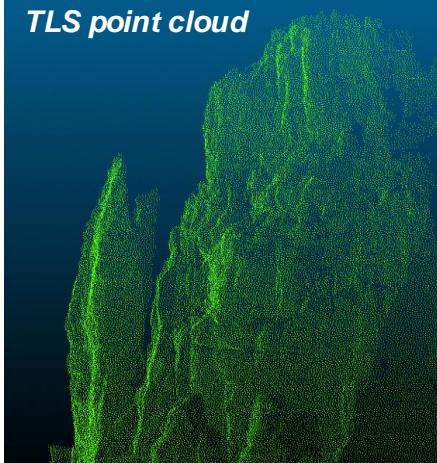

## Future applications

Use of monitoring data

- Numerical modeling
- Displacement forecast
- Climate change

*TLS point cloud*
